

Bat Mask Activity

One of the most fascinating aspects of bats is their facial anatomy. The great diversity of face types is due to differences in lifestyle and diet. For example, some bats that feed on nectar need long, thin faces to insert into flowers, while insect-eating bats have shorter muzzles and stronger jaws to chomp down on insects.

The bat masks will give children an opportunity to examine the facial anatomy of four different kinds of bats!

Materials:

Paper or card stock
Crayons or color markers
Scissors
Hole punch
Elastic string
